

**Dag HAUG**

*The PROIEL corpora*

In this talk, I will present the work we did in creating the PROIEL corpora, survey the resources we created and discuss our future plans. I will discuss the challenges we met in annotating ancient Indo-European languages and in particular in maintaining parallelism in annotation between the different languages, compatibility with other resources for our languages, and lately also with universal dependencies. I will also demonstrate the more recent syntacticus platform and talk about our future plans.
