

**James TAUBER**

*Title: The Scaife Digital Library Viewer*

Although originally conceived as the next generation reading environment for the Perseus Digital Library, the Scaife Digital Library Viewer has grown into an extensible platform for building a variety of online reading environments, both for scholars and language learners, that bring together historical language texts and rich annotations. As well as outlining the architecture of the Scaife ecosystem, the talk will demonstrate a number of different projects being built on Scaife including a reading environment for Latin (and other) language learners being developed for Harvard. It will also touch on some of the challenges in linking linguistic data and some solutions being developed, with specific application to integrating lexical resources.
